

MOTION SENSOR CEILING LIGHTS

Bright, motion-sensor-activated LED ceiling lights that seamlessly install with Legend's Insulated DuraTherm Ceiling Liner to dramatically enhance the cargo area workspace.

WHY SHOULD I CONSIDER THESE CEILING LIGHTS? I ALREADY HAVE SOME CHEAP ONES WE GET ONLINE...

MOTION SENSOR ACTIVATED

These lights turn on only where and when in the van you need them. While delivering goods for example, there's no need to worry about having to open the side door to turn on the lights, which is where the factory light switch circuit is. Where you go, they turn on for you. This also reduces the draw of power on the vehicle, and avoids the battery going flat when the lights are left on.

FAST & EASY INSTALLATION

With the plug & play wiring with snap-together feed looms, these are the easiest vehicle lights to install. They seamlessly recess mount into Legend Ceiling Liners, and because they're motion sensor activated and don't need a switch, there's no need for a electrician-specific installer. Anyone can install these lights! The installation instructions are also very clear and easy to understand.

EXTREMELY BRIGHT LIGHTS

Each LED light is very powerful at 1800 lumens, much higher than most single lights. Their low-profile shape is designed to spread the light consistently and even further across the Ceiling Liner, creating an well-lit, enhanced cargo space like never before. Their sleek, modern design is aesthetically pleasing, resembling more of a home light than a bulky, industrial light, furthermore creating a comfortable, bright workplace.

PREMIUM QUALITY & LONG LASTING

If you've come to know Legend at all, you know that we don't compromise on quality. Unlike other lights that die out after a while, these will last for years to come. These polycarbonate European-crafted lights are fully waterproof and built to withstand any knocks or scrapes.
